

MusicForge

Evidence-based app summary from repo contents

One page. Based only on repo evidence.

WHAT IT IS

MusicForge is a web app for creating, organizing, sharing, and monetizing AI-generated music tracks. It combines prompt-driven generation, projects, credits, subscriptions, and public discovery in one workspace.

WHO IT'S FOR

Primary persona: independent creators and small teams that need to move from a music idea to a playable draft quickly.

HOW TO RUN

1. Copy `.env.example` to `.env.local` and set `VITE_SUPABASE_URL`, `VITE_SUPABASE_ANON_KEY`, `VITE_STRIPE_PUBLISHABLE_KEY`, and `VITE_APP_BASE_URL`.
2. Install dependencies with `npm install`.
3. Start the dev server with `npm run dev`.

Local Supabase CLI startup and edge-function secret bootstrap steps: Not found in repo.

WHAT IT DOES

- Prompt-based AI track generation with genre, BPM, key, duration, and mode controls (standard, variation, extend, remix).
- Project workspace with saved history, recent work, remix/retry flows, and auto-save.
- Credits-aware plans with Free, Pro, and Studio tiers.
- Stripe checkout, self-serve billing portal, and webhook-based subscription sync.
- Public explore feed, creator profiles, public track pages, and plays/likes/shares.
- Marketplace listing and purchase flow for creator-listed tracks.
- API-key-based POST `/api/generate` endpoint for external generation clients.

HOW IT WORKS

- Frontend: Vite + React + TypeScript SPA using React Router, Zustand state, Tailwind styling, and client analytics.
- Auth and data: Supabase Auth plus Postgres-backed app data including profiles, projects, and AI generations.
- Server workflows: Supabase Edge Functions handle run-generation, checkout, portal, and Stripe webhook logic with validation, CORS, auth, and rate limits.
- Data flow: user submits a generation in the UI -> frontend creates generation and credit records in Supabase -> run-generation calls Replicate and writes status/output back -> billing actions go to Stripe -> stripe-webhook syncs subscription and marketplace sale data to Supabase.
